

REMARKS

Claims 1-6 are in the application.

As required for allowance, the formal matters of figure numbering and a second Figure of a flow chart have been added to both the drawings and the text of the specification.

The Abstract has been amended to be less than 150 words with deletion of objected to phraseology.

The heading describing the drawings has been changed from "Short" to "Brief", as required.

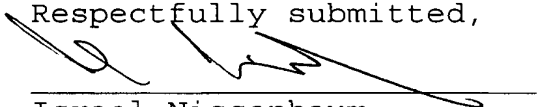

The Examiner's objection to the Declaration is not in order since the application was filed with and Application Data Sheet and the Declaration is the one made available by the USPTO for such use. The omitted information is in the ADS and no date of execution is required except for the Power of Attorney. The Examiner is requested to review and withdraw the objection.

As required, claim 1, step c has been clarified with respect to percentage determination. Reference of negative or positive polarization refers to the determinants and in step d of claim 1 reference is indeed with respect to the new compound.

In view of the attached submissions, the above amendments, and discussion, it is believed that all formal matters have been taken care of and that the application is in condition for full allowance. Such favorable action is respectfully solicited.

Respectfully submitted,

Date: June 3, 2003

Israel Nissenbaum
Attorney for Applicant(s)
